For Immediate Release

Compusult Announces Next-Generation Web Enterprise Suite (WES), Advancing AI-Powered Geospatial Intelligence and Operational Decision-Making

November 12, 2026

(Mount Pearl, Canada) - Compusult Limited today announced the next generation of its flagship Web Enterprise Suite (WES) platform, an enterprise software platform that helps organizations manage, share and make better use of their information. The enhanced enterprise platform brings together artificial intelligence, geospatial data management, predictive analytics, real-time situational awareness, and mission-critical operations in a unified environment.

The latest evolution of WES helps government agencies, defense organizations, emergency management authorities, and commercial enterprises transform complex information into actionable intelligence through an integrated, secure, and scalable software environment.

"Organizations are dealing with more information than ever, and making sense of it quickly can be a challenge," said Larry Bouzane, Chief Technology Officer of Compusult. "The next-generation of WES brings together geospatial intelligence, AI, and other tools needed to understand the operating environment and make informed decisions."

Introducing the Next Generation of WES

WES provides a comprehensive framework for discovering, managing, analyzing, visualizing, and distributing geospatial and non-geospatial information.

Designed around modular architecture and open standards, WES enables organizations to deploy capabilities that address their specific operational and business requirements while supporting integration. As organizations increasingly depend on timely, accurate, and accessible information, the ability to integrate artificial intelligence, geospatial technology, and operational intelligence has become essential.

Compusult's next-generation WES platform reflects this evolution by providing a foundation for organizations seeking to improve situational awareness, streamline information management, enhance collaboration, and support faster, better-informed decisions.

"Our goal is to give organizations a practical and flexible way to connect their information, systems and people." said Barry O'Rourke, President of Compusult. "By integrating AI-driven analysis, geospatial intelligence, and real-time operational capabilities, WES can help customers make more effective use of their information resources."

Availability

The next-generation Web Enterprise Suite is available. To learn more or arrange a demonstration, visit www.webenterprisesuite.com or contact Compusult.

About Compusult Limited

Compusult Limited is an international technology company specializing in geospatial information management, enterprise software solutions, systems integration, mission-critical applications, inventory management, robotics, electronics and assistive technology.

Through its Web Enterprise Suite (WES) platform and related technologies, Compusult provides software solutions supporting information discovery, geospatial data management, operational intelligence, emergency management, and enterprise collaboration.

Compusult serves government, defense, and commercial organizations seeking innovative solutions for managing complex information and operational requirements.
